

Nigerian Digital Travel Registry (NDTR)

A Strategic Framework for Secure, Trusted Mobility & Global Cooperation

Context & Opportunity

Nigerians face disproportionate visa barriers due to the actions of a few. A national digital travel registry transforms this challenge into a strategic asset, providing data to protect lawful citizens, secure borders, and rebuild Nigeria's global standing.

Proposed Solution

A mandatory, secure, pre-departure digital portal for all Nigerian international travelers. Registration will capture essential, verifiable trip data (purpose, destination, duration, contact details) via multiple channels.

Core Strategic Benefits

Diplomatic Power: Generate authoritative, auditable data to counter blanket visa restrictions and negotiate from a position of evidence.

Proactive Security: Provide the NIS and security agencies with intelligence to identify and intercept high-risk travel patterns before incidents occur abroad.

Reputational Shift: Demonstrate to international partners that Nigeria is a proactive, data-driven, and cooperative sovereign state.

Operational Efficiency: Streamline passenger processing at ports, modernizing border management in line with global standards.

Built on Trust & Compliance

NDPR-Compliant Foundation: Designed from the ground up to adhere to the Nigeria Data Protection Regulation.

Strict Governance: Data access is restricted to authorized agencies for defined purposes, with oversight protocols.

Universal Access: Multi-channel registration (Mobile App, USSD for basic phones, Web Portal) ensures no citizen is left behind.

Global Precedents (Proof of Concept)

This is an established global practice for modern migration management:

- * **Philippines:** eTravel System
- * **India:** e-Migrate Portal (for emigrant workers)
- * **European Union:** ETIAS (Authorization System, upcoming)
